

DX-80

Business Telephone System

Specifications

- 4 CO Line Ports
- 8 Digital Ports
- 4 analog Ports
(Used for: PC Modems, Corded/Cordless Single-line Telephones, Fax Machines)
- Expandable to 16 CO lines, 56 Extensions, (48 Digital Extensions and 8 Analog Ports)

System Features

Uniform Call Distribution (UCD):

Allows extensions to be linked for call handling. When a call is received, the system will search the extension group and forward the call to the next available agent.

Caller Identification: Name and telephone number is displayed on analog and digital telephone sets.*

8x3 Conferencing: The DX-80 can simultaneously support up to 8 conference calls of up to three parties each.

PA Announcement: Allows subscribers to connect to an internal or overhead paging system to announce a call.

Modem Option: The DX-80 Modem Module supports remote system configuration.

Automated Attendant Option:

Automatically answers incoming calls and handles overflow traffic when a live attendant is too busy or after hours.

"Big Company" Telecommunications Solution for Small Businesses

Comdial's DX-80™ Small Business Telephone System is a feature-rich key system for businesses with anywhere from 4 up to 50 employees. In addition to offering standard functionality previously available only on higher-end PBXs, the DX-80 supports an integrated voicemail option based on Comdial's industry-recognized Corporate Office® Voice Messaging software. Together, this combination provides small businesses with a 'big company' telecommunications solution at a very affordable price.

Expandable Architecture

With the DX-80, small businesses get started with reliable, scalable communications technology. Its base configuration supports 4 CO lines, 8 digital extensions and 4 analog ports and can be expanded to support 16 CO lines, 48 digital extensions and 8 analog ports.

Interactive, LCD Speakerphone

The DX-80 digital telephone is simple to program and easy to use. An interactive LCD displays caller identification, as well as step-by-step instructions on programming important system features. Thirty dual-color status LEDs indicate active headset, mute, DND and other call modes. Fixed feature buttons provide one-touch access to calling options such as call forward, call park and voice mail.

Rich Feature Set

The DX-80 supports over 100 standard features and options including Caller Identification, Conference Calling, Toll Restriction and Unified Call Distribution. These features are designed to improve operation efficiency by minimizing customer response time.

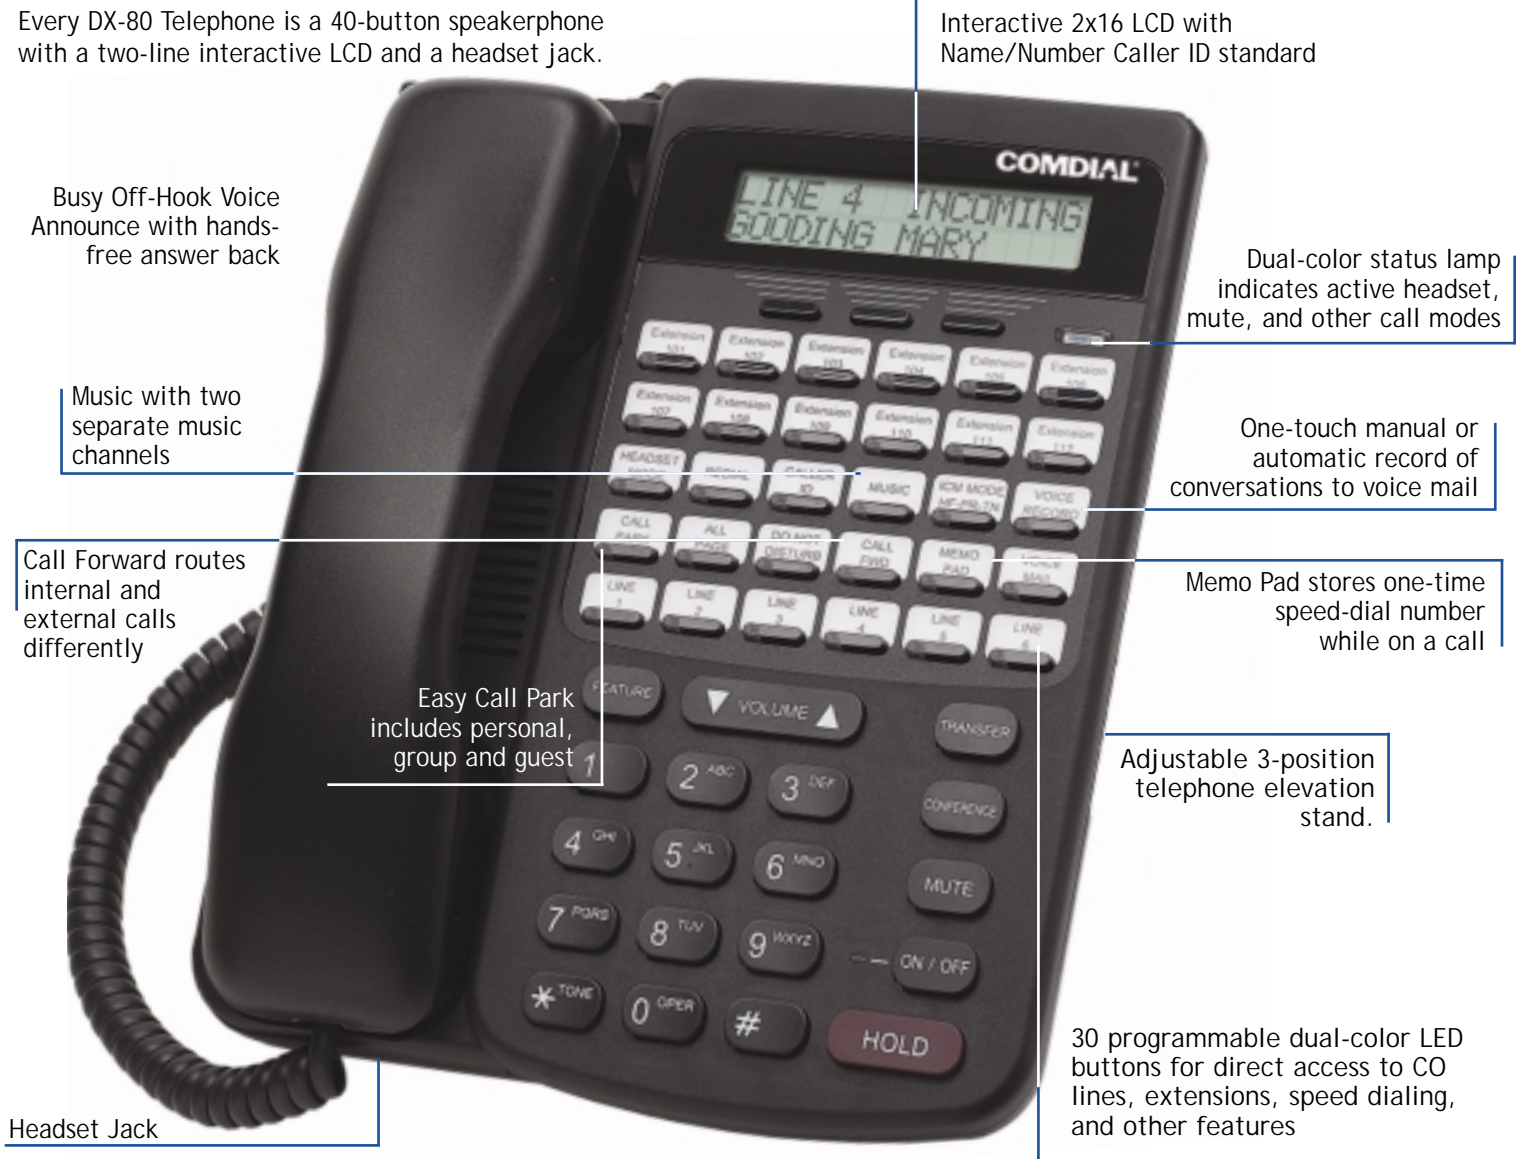

Integrated Automated Attendant and Voice Mail

The Corporate Office DX Flash Voice Mail option is offered as an internal board in the DX-80 system package. The Flash option supports four voicemail channels and can be expanded to support 8-channels to provide increased capacity. In addition, this option supports 90 minutes of storage time and is optimized for up to 100 voice mailboxes. The internal Hard Drive option supports 8 voicemail channels and 100 hours of storage time. Beyond standard voicemail capability, Corporate Office DX includes advanced functions such as call screening, real-time recording of active calls, public address system paging, pager notification upon receipt of new voicemail messages, and call transfer to off-premise locations (such as to a home or mobile telephone). Furthermore, since the voice mail is integrated, it doesn't consume valuable system port capacity.

* Note that this function requires Incoming Caller Identification provided by the local telephone company.

DX-80 Telephone System

Every DX-80 Telephone is a 40-button speakerphone with a two-line interactive LCD and a headset jack.

Optional Voice Mail Features

Integrated Voice Mail: Supports enhanced voice mail features based on Comdial's industry recognized Corporate Office Voice Messaging software.

Live Call Screening: Announces a caller's name when a call is answered, allowing the user to accept the call, forward it to another extension or send to voicemail.

Live Call Recording: At the touch of a button, conversations can be recorded and stored in your voice mail for future reference.

Pager Notification: Automatically pages subscribers when they receive messages in their mailboxes.

Transfer Off-Premise: Automatically transfers subscriber's voicemail to an off-premise location such as the subscriber's home or mobile phone, reducing the number of missed calls.

Built-In Automated Attendant Feature: Automatically answers incoming calls and handles overflow traffic when a live attendant is too busy or after hours.
