The New Wireless Digital Keypad From PCS Digital

The **WIRELESS DIGITAL KEYPAD** is designed to allow you to move freely around your facility while maintaining access to any number of outside lines and resources of your office telephone system. It has most of the features of our wired digital keysets including Call Announce with Handsfree Answerback Intercom. You can respond to intercom calls handsfree without having to touch anything — and the speakerphone is great for handsfree communications on outside calls while working on other tasks.

You can access up to 6 outside lines that appear directly on your keypad or any number of lines that do not appear on your wireless keypad. **It works just like a wired digital key telephone except it is portable!**

Other features include a 2.5 mm headset jack so you can use your standard cell phone headset while the unit is clipped onto your belt. It can be programmed to ring or vibrate so you can receive calls without disturbing others. The Wireless Digital Keypad has an interactive, backlit display with soft function keys that help you activate other features.

Best of all, it can cover **up to 70,000 square feet** (depending on your environment). There is nothing else on the market like it for the price. What a great value when you consider how it can improve the effectiveness of your existing business communications.

Ask your local authorized PCS Digital Dealer to demonstrate our new wireless products for you to see how they will improve the efficiency of your business.

Our new wireless keypad integrates with the entire PCS Digital product line
